PROFESSIONAL SUMMARY

Full-Stack Developer with two years of intensive software development training and 5 years of project management experience. Proven expertise in building AI-integrated web applications using Python, JavaScript, Go, and modern frameworks. Successfully developed health-tech solutions including machine learning-powered prediction tools and secure platforms for sensitive use cases. Strong foundation in both frontend (React, Next.js) and backend (Django, Go, Node.js) development with hands-on experience in API design, database management, and CI/CD workflows. Passionate about leveraging technology for social impact, particularly in gender equality and community empowerment.

CORE TECHNICAL SKILLS

Programming Languages & Frameworks

- Backend: Python (Django, Flask, Pandas, Scikit-learn), Go (Gin), Node.js
- Frontend: JavaScript, React, Next.js, HTML, CSS, Tailwind CSS, Bootstrap
- Additional: Rust (learning), TypeScript

AI & Machine Learning

- Machine learning model implementation (Random Forest, Decision Tree)
- AI API integration (experience with AI-powered features)
- Data processing and analysis with Pandas and Scikit-learn

Development Tools & Technologies

- Version Control: Git, GitHub
- Databases: MySQL, PostgreSQL
- DevOps: Docker, CI/CD pipelines
- Development Environment: VS Code, Linux/Unix command line
- API Development: RESTful API design and implementation

UI/UX & Design

- Figma (Prototyping, Wireframing, High-fidelity designs)
- Brainstorming: Miro
- Design Thinking, User Flow Analysis, Responsive Design

PROFESSIONAL EXPERIENCE

Full- Stack Developer | Zone01, Kisumu | April 2024 – Present

Building full-stack, AI-integrated health-tech applications with focus on backend architecture, machine learning implementation, and user-centered frontend development.

- Architected and developed AfyaKuu, an AI-powered cervical cancer risk prediction platform, implementing Random Forest and Decision Tree models using Python (Scikit-learn, Pandas)

- Built scalable RESTful APIs using Go (Gin) and Python (Django/Flask) to serve machine learning predictions and manage application state
- Developed responsive, accessible frontend interfaces using React and Next.js with modern state management and component design patterns
- Implemented containerization with Docker and managed CI/CD pipelines for automated testing and deployment
- Led end-to-end UI/UX design process using Figma, creating wireframes and interactive prototypes for sensitive healthcare applications
- Practiced Agile methodologies including sprint planning, code reviews, and collaborative development using Git version control

Program Officer | Institute for Faith and Gender Empowerment (IFAGE), Nairobi | May 2019 – April 2024

Managed gender transformative community-centered initiatives combining gender equality and climate resilience

- Led full project lifecycle management for gender empowerment programs, engaging over 500 women and community stakeholders
- Implemented monitoring and evaluation (M&E) frameworks using data-driven insights to optimize program effectiveness
- Built strategic partnerships with NGOs and government bodies, demonstrating strong stakeholder collaboration skills.

KEY TECHNICAL PROJECTS

AfyaKuu – AI-Powered Health Risk Assessment Tool

- Full-stack health-tech application providing cervical cancer risk prediction using machine learning
- Trained and deployed Random Forest and Decision Tree models with Python (Scikit-learn, Pandas)
- Built RESTful API with Django/Flask connecting React frontend to ML backend
- Technologies: Python, Scikit-learn, React, Django/Flask, Docker, CI/CD

HEAL – Support Platform for SGBV Survivors

- Secure web application providing therapeutic resources for survivors of sexual and gender-based violence
- Developed interactive frontend features using Next.js with focus on sensitive UX design
- Implemented secure backend with Go ensuring user data privacy and protection
- Technologies: Go, Next.js, JavaScript, Figma

Koru Mission Hospital – Institutional Website

- Professional healthcare institution website with appointment scheduling and information management
- Mobile-first responsive design using Tailwind CSS
- Backend CMS implementation for easy content updates

EDUCATION & CERTIFICATIONS

- **Software Development Training** – Zone01 Kisumu | April 2024 – Present
- **Bachelor of Commerce (IT Focus)** – Kirinyaga University | 2017
- **Fundamentals of Designing & Deploying Computer Networks (DDCN)** – Internet Society | 2025
- **Gender Transformative Programming** - African Population and Health Research Center (APHRC) | 2025
- **Project Planning, Monitoring, Evaluation & Learning** – Corat Africa | 2023
- **German Language Certification (B1)** – Goethe Institute Nairobi | 2017

ADDITIONAL COMPETENCIES

- **Agile Development:** Sprint planning, code reviews, team collaboration
- **Project Management:** Full lifecycle management, stakeholder engagement, M&E
- **Languages:** English (Fluent), Swahili (Fluent), German (Intermediate B1)
- **Community Impact:** Technology for social good, gender equality advocacy, youth mentorship
